Title: Full Stack .NET / Python Developer
Status: OPENED
From: WEB
Enterprise: HYUNDAI
Description: Job Title: Full Stack Developer
Contract Duration: As soon as possible -
Work Location: 1020 Brussels
Remote Status: Hybrid
Languages: English, French OR Dutch

Role Overview
The Full Stack Developer will be responsible for developing and maintaining internal applications across front-end, middle-tier, and back-end layers. This includes:
• Designing and implementing new applications in collaboration with the IT team and relevant departments.
• Ensuring compatibility of software systems through interface development.
• Conducting audits and redesigning applications to optimize performance.
• Providing ongoing maintenance and user support for internal systems.
Key Responsibilities
Application Development & Maintenance
• Full Stack PHP Development: Develop applications using the Laravel framework, covering backend logic, database management, and front-end development (HTML/CSS/JS).
• Git Version Control: Manage repositories, branches, merges, and pull requests within collaborative projects.
• Integration with DevOps Processes: Ensure seamless integration into the team's DevOps workflow.
• VueJS Development: Build reusable components for the Vuemann intranet framework.
• Automated Front-End Testing: Implement and maintain Jest and Cypress tests to ensure robustness.
• Application Audit & Redesign: Analyze and optimize existing PHP code, identifying dependencies and database structures.
• Database Management (MySQL): Perform modeling, queries, and migrations for core business and intranet applications.
• Technical Documentation: Write user and developer documentation to enhance maintainability.
• Production Bug Fixes & Support: Resolve issues, collaborating with hospital users.
• Business Interface Development: Design ergonomic interfaces for HR departments, invoicing, and other non-technical audiences.
